

the GPS never say you are exactly
it says you are somewhere within a meters
of hers

- A - Whole circle inside
- B - Whole circle outside
- c - on the edge

$R = 100\text{ m}$ - the dot is the target

if A 40 m from target and $a = 20\text{ m}$,
worst case: $40 + 20 = 60\text{ m}$ away.
since $60 < 100 (R)$ - worst case inside

if B 250 m away. Best case with $a = 30$
 $250 - 30 = 220$ still $220 > 100 (R)$
Best case outside

if C 90 m away, $a = 70$ m

worst case: $90 + 70 = 160 : > 100 (R)$
(outside)

Best case: $90 - 70 = 20 : < 100 (R)$
(inside)
